Modify Elements from a List with Streams

Usecase: Moving Directory structures. Example: copy files with directories to different Root Path
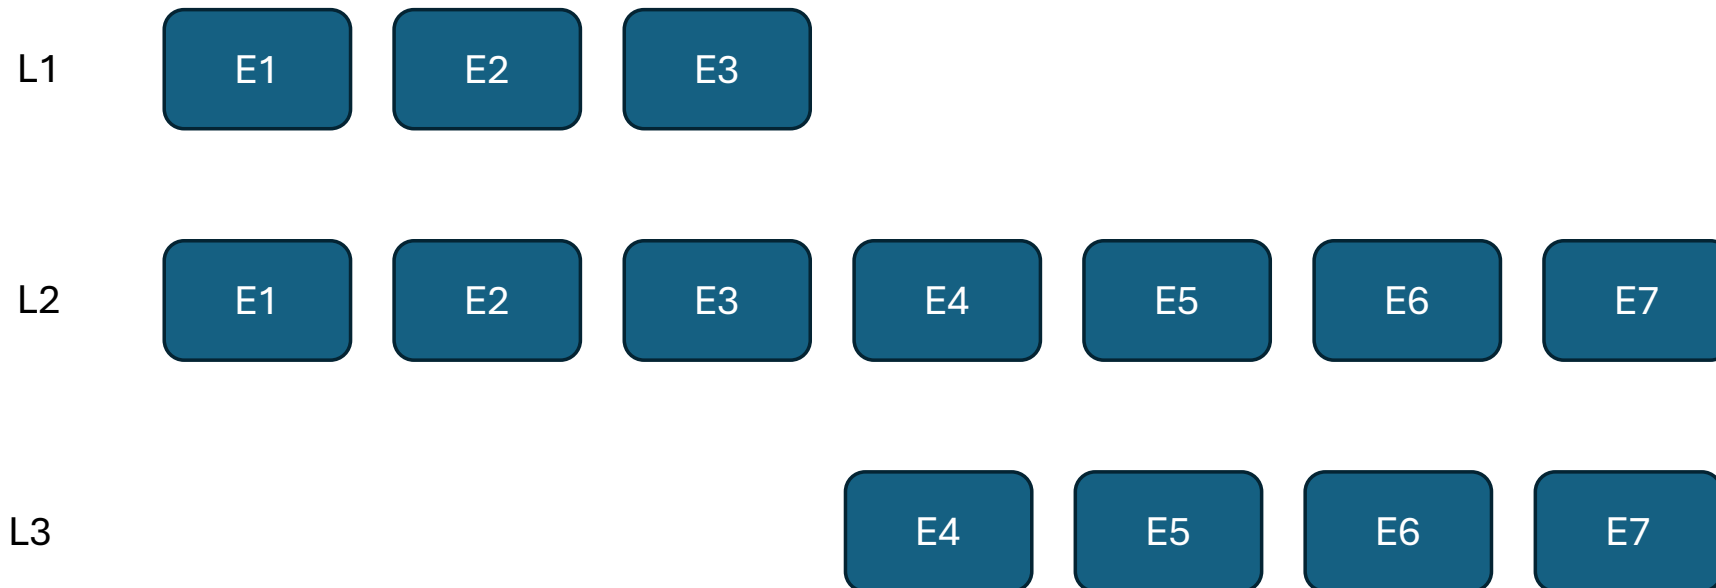

Source: C:\Windows\System32\Boot\en-US
Dest: C:\Whatewer Directory\Boot\en-US
Solution in two step:
1.) **remove** C:\Windows\System32 so the result is then: Boot\en-US
2.) **add** a new Root Dir C:\save\Whatewer Directory\ **to** Boot\en-US

Removing Elements

L1	E1	E2	E3

L2	E1	E2	E3	E4	E5	E6	E7

| L3				E4	E5	E6	E7

1.) **remove** C:\Windows\System32 so the result is then Boot\en-US

L1: C:\Windows\System32
L2: C:\Windows\System32\Boot\en-US
L3: Boot\en-US

Add new Root Path

M1 | E4 | E5 | E6 | E7 |

M2 | F1 | F2 |

M3 | F1 | F2 | E4 | E5 | E6 | E7 |

2.) **add** a new Root Dir C:\save\Whatewer Directory\ **to** Boot\en-US

M1: Boot\en-US
M2: C:\save\Whatewer Directory
M3: C:\save\Whatewer Directory\Boot\en-US
